

CV ENCORE TORIC™ from CooperVision: A new soft contact lens designed to correct astigmatism, a common visual condition caused by an irregularly shaped cornea. CV Encore Toric offers crisp vision with the convenience of a disposable lens. The lenses are manufactured with the latest technology producing a perfect edge on every lens, so that you can enjoy outstanding comfort. And, by changing to a clean, fresh pair every two weeks, you ensure healthy, comfortable vision. Contact our office to see if CV Encore Toric lenses are the right fit for you.

ALL SPHERES ARE NOT CREATED EQUAL

While spheres are the most common type of contact lens on the market, there are spherical lenses that are anything but ordinary. Lenses that offer your patients an unmatched combination of visual performance and comfort. That's Frequency 55 Sphere and Frequency 38 Sphere from CooperVision.

CONSISTENT SUPERIOR FIT AND COMFORT—proven designs and our patented UltraSync® manufacturing process result in a well-formed, thin mid-apex edge and outstanding performance, lens after lens

EASY HANDLING—both Frequency spheres feature a helpful light blue handling tint and durable materials

FREQUENCY 55 SPHERE

Made from methafilcon A, it's an all-around great performing lens available in a wide range of parameters

FREQUENCY 38 SPHERE

Proven polymacon lens material helps this lens offer all the benefits of the Frequency family in a low-water lens option
